Real cool solutionsSM

Part water softener, part carbon filter, the Penguin Hybrid Water Softener not only softens the water, but also removes chemicals, pesticides, chlorine, chloramine and VOC's to provide healthy, clean, soft water for everything in your home, including your skin and hair. Most families want clean, pure drinking water free of chemicals, but did you know that your body's largest organ (the skin) absorbs more chlorine and chemicals than you can drink in a day? Additionally, by removing both the hardness and chemicals, you prolong the life of your homes plumbing system and everything water touches.

This hybrid water softener uses a special blend of coconut shell GAC Carbon and Catalytic Carbon to remove Chlorine and Chloramine. The incredible Vortech tank has the resin in the bottom chamber, and the Carbon into the top chamber. Your skin and hair will thank you every day.

Built-in Bypass Valve

Allows you to easily bypass the system for watering lawns, filling pools, etc.

The Penguin Control Valve is made of rugged, indestructible Noryl™ which handles high flow rates without dropping household water pressures — like when showers, toilets and faucets are all in use at the same time.

The Penguin Smart Meter measures the actual gallons used and only regenerates when needed, saving thousands of dollars in salt and wasted water.

The Advanced Smart Technology Electronics records all operations, including gallons per day, total gallons, peak flow rates, and total regenerations. Time and history are held in memory and protected by a built-in battery backup. When the system is in regeneration, if the power goes out the battery puts it back to service and does not waste water or salt.
